Python,

Objectives

Highly adaptable, result oriented, laterally thinking dot connector that has earned a certificate in Full Stack Software Development. Leveraging expertise in communications and psychology to connect endpoints and provide valuable insight within the bridge that does so. Alongside persistently fostering productivity and homeostasis within that, this driven leader has a tenacious yet gentle, inclusive, supportive, secure approach as a software developer, clear communicator, methodical coordinator that is here to steadily cultivate solutions. While considerately inspecting this analysis, it may be good to know that this candidate is an observant, inquisitive, keen listener that acknowledges significance in us.

Projects

The Local List - -
◦ Summary: This dynamic webpage allows the user to search any city to then instantly obtain a snapshot of the weather forecast of that location as well as a list of upcoming live events in that city of choice.
◦ Tools: HTML, CSS, Tailwind [CSS framework], JQuery, OpenWeather API, Ticketmaster API
https://github.com/RPMcQuigg/Vandy-Project-01   https://rpmcquigg.github.io/Vandy-Project-01/

The Eerie Papers - -
◦ Summary: With this website, a user can create an account or login to their previously existing account where in which they can insert a caption & description of supernatural / paranormal stories, along with an image to depict their encounter / experience on their post. There is another section of this site called "the Lore" where a user can post descriptions and discuss theories.

Live: Interactive - -
◦Summary: With this web application, users can interact with a platform that enables event patrons to

efficiently report and track lost items via the Lost ? Found. forum route of the page. Users are then prompted here for a brief description of the lost item along with queries to respond to specifying the time and location of the loss. This includes a toggle to categorize posts as 'Lost || Found' , which can be switched when an update occurs. A commenting system simplifies direct communication for effective item recovery initiatives, which includes media upload, hashtags, and username.
